Establishing a Dialogue on Risks from Electromagnetic Fields World Health Organization. Radiation and Environmental Health, World Health Organization, 2002-12-31 Public concern over possible health effects from electromagnetic fields (EMF) has led to the preparation of this handbook. Potential risks of EMF exposure from facilities such as power lines or mobile phone base stations present a difficult set of challenges for decision-makers. The challenges include determining if there is a hazard from EMF exposure and what the potential health impact is. Responding to these challenges requires the involvement of individuals or organizations with the right set of competencies combining relevant scientific expertise strong communication skills and good judgement in the management and regulatory areas. This handbook is intended to support decision-makers faced with a combination of public controversy scientific uncertainty and the need to operate existing facilities and/or the requirement to site new facilities appropriately. Its goal is to improve the decision-making process by reducing misunderstandings and improving trust through better dialogue. The guide may assist the general public when interacting with government agencies that regulate environmental health and with companies whose facilities may be sources of concern. References and suggestions for further reading are included.

Trace Element Analysis of Food and Diet Namik K Aras, O Yavuz Ataman, 2007-10-31 Trace element analysis has a key role to play in quality control of food and diet. This timely book introduces the subject in a practical way - from sampling and the techniques available for trace analysis, to procedures for specific elements and data analysis. Beginning with a brief introduction and discussion of statistical evaluation of data, the subsequent chapter looks at trace analysis in general, with its essentials and terminology. Another section introduces sampling and preparation of foodstuffs such as wheat, potato, vegetables and milk. This is followed by descriptions of the various spectrometric techniques (atomic absorption, atomic emission, atomic fluorescence) that are available. Plasma techniques for both optical emission and mass spectrometry are presented, as are nuclear activation analysis and X-ray methods. A comparison of the various analytical techniques is provided, and a separate chapter handles speciation analysis. Finally, procedures for determining essential and toxic elements such as arsenic, iron, selenium and zinc are suggested, using several recent references. Detailed explanations and a simple format will appeal to laboratory technicians and graduate students, as well as more experienced researchers. Comprehensive coverage, coupled with illustrations and a guide to relevant literature and manufacturers, will make Trace Element Analysis of Food and Diet a valuable source of information for anyone working on analysis of trace elements in food,

diet or other biological or environmental samples - particularly food engineers, agricultural scientists and government testing agency employees.

Mycotoxins in Food N Magan,M Olsen,2004-07-16 Mycotoxins, toxic compounds produced by fungi, pose a significant contamination risk in both animal feed and foods for human consumption. With its distinguished editors and international team of contributors, Mycotoxins in food summarises the wealth of recent research on how to assess the risks from mycotoxins, detect particular mycotoxins and control them at differing stages in the supply chain. Part one addresses risk assessment techniques, sampling methods, modelling and detection techniques used to measure the risk of mycotoxin contamination and the current regulations governing mycotoxin limits in food. Part two looks at how the risk of contamination may be controlled, with chapters on the use of HACCP systems and mycotoxin control at different stages in the supply chain. Two case studies demonstrate how these controls work for particular products. The final section details particular mycotoxins, from ochratoxin A and patulin to zearalenone and fumonisins. Mycotoxins in food is a standard reference for all those concerned with ensuring the safety of food. Discusses the wealth of recent research in this important area Covers risk assessment, detection of particular mycotoxins and how to control them throughout the supply chain Describes how the risk of contamination can be controlled, including the use of HACCP systems

A Cowboy Christmas Janette Kenny,2009-10-06 A holiday tale that gets the (snow)ball rolling on a trilogy made up of the “western romances readers have enjoyed for decades” from the bestselling author (Romantic Times). Reid Barclay doesn’t have time for Christmas, not with trouble brewing at the Crown Seven Ranch. He’s got prize thoroughbreds to protect and a long-ago wrong that he wants to make right. But the beautiful cook who’s taken over the ranch kitchen is a welcome distraction, even if Ellie Jo Cade burns everything from gingerbread to roast beef. Her sweet face and womanly figure are pure temptation . . . Cornhusk angels . . . bright berry garlands . . . spun-sugar snow—everything about Christmas holds fond memories for Ellie Jo. She’s doing her best to make peace with an ornery wood-burning stove and make the old

ranch house truly festive. All she wants is to believe in Reid . . . and the only-at-Christmas magic that makes hearts glow . . . Praise for the Lost Sons Trilogy “A Cowboy Christmas is exciting and surrounded with tons of mystery and treachery. This story will definitely keep your mind running wild with possibilities.” —Fresh Fiction “A hero you’re gonna love.” —Jodi Thomas, New York Times–bestselling author “A classic western . . . Kenny delivers.” —RT Book Reviews

Aluminium Toxicity in Infants' Health and Disease P F Zatta, A C Alfrey, 1998-01-02 Aluminium is the most abundant metal ion in the biosphere and we are continuously exposed to it in our everyday life through food, beverages, pharmaceutical products, etc. This book is a current and comprehensive review of the biochemistry, metabolism and toxicity of aluminium undertaken by an international group of authors, many of whom are outstanding authorities in their respective fields. In contrast with previous books on this topic, much of the subject matter is unique, in that it is primarily directed at aluminium nutrition and toxicity in infants and children. This book covers many aspects of aluminium toxicity in infants including for instance the embryo-fetal as well as the neurodevelopmental effects of this element, contamination of pharmaceutical products, and individual sensitivity through vaccines using aluminium as an adjuvant. This book will be especially useful to paediatricians, paediatric nephrologists & neurologists, nutritionists, toxicologists, biochemical toxicologists and postgraduate students. Contents: Chemistry, Biochemistry and Physiology: The Importance of Aluminium Chemistry in Biological Systems (R B Martin) Aluminium-26 as a Biological Tracer Using Accelerator Mass Spectrometry (R Flack & D Elmore) Aluminium Toxicity Depends on the Metal Speciation (P F Zatta & P Zambenedetti) Aluminium Metabolism (A C Alfrey) Aluminium and Iron Relationship: Pathophysiological and Clinical Overview (J B Cannata Andia) Pediatrics: Aluminium in Infancy (K Simmer) Aluminium Toxicity in Infants (M E McGraw) Aluminium-related Bone Disease in Children with Renal Failure (B D Kuizon & I B Salusky) Aluminium and Antacids in Infants (J W L Puntis) Development and Aluminium Experimental Toxicity (R L Domingo) Pediatric Pharmacology: Aluminium Content of Parenteral Nutrition Products (G L Klein) Aluminium-26 as a Biological Tracer Using Accelerator Mass Spectrometry (A Moreno et al.) Responsible Use of Antibiotics in Aquaculture Pilar Hernández Serrano,Food and Agriculture Organization of the United Nations,2005 Antibiotics are drugs of natural or synthetic origin that have the capacity to kill or to inhibit the growth of micro-organisms. Antibiotics that are sufficiently non-toxic to the host are used as chemotherapeutic agents in the treatment of infectious diseases of humans, animals and plants. They have long been present in the environment and have played a crucial role in the battle between man and microbe. Many bacterial species multiply rapidly enough to double their numbers every 20-30 minutes, so their ability to adapt to changes in the environment and survive unfavourable conditions often results in the development of mutations that enable the species to survive changing external conditions. Another factor contributing to their adaptability is that individual cells do not rely on their own genetic resources. Many, if not all, have access to a large pool of itinerant genes that move from one bacteria cell to another and spread through bacterial populations through a variety of mobile genetic elements, of which plasmids and transposable elements are two examples. The capacity of bacteria to adapt to changes in their environment and thus survive is called resistance. Drug choices for the treatment of common infectious diseases are becoming increasingly limited and expensive and, in some cases, unavailable due to the emergence of drug resistance in bacteria and fungi - resistance that is threatening to reverse much medical progress of the past 50 years. Dissemination of resistant micro-organisms may occur in both hospitals and communities. It is recognized that a major route of transmission of resistant microorganisms from animals to humans is through the food chain. In aquaculture, antibiotics have been used mainly for therapeutic purposes and as prophylactic agents. The contribution to antimicrobial resistance of antibiotics used in aquaculture is reviewed here, using a risk analysis framework. Some recommendations on responsible

conduct in this context are proposed, aimed at diminishing the threat of build up of antimicrobial resistance.

Handbook of Milk of Non-Bovine Mammals Young W. Park, George F. W. Haenlein, William L. Wendorff, 2017-07-24 THE ONLY SINGLE-SOURCE GUIDE TO THE LATEST SCIENCE, NUTRITION, AND APPLICATIONS OF ALL THE NON-BOVINE MILKS CONSUMED AROUND THE WORLD Featuring contributions by an international team of dairy and nutrition experts, this second edition of the popular Handbook of Milk of Non-Bovine Mammals provides comprehensive coverage of milk and dairy products derived from all non-bovine dairy species. Milks derived from domesticated dairy species other than the cow are an essential dietary component for many countries around the world. Especially in developing and under-developed countries, milks from secondary dairy species are essential sources of nutrition for the humanity. Due to the unavailability of cow milk and the low consumption of meat, the milks of non-bovine species such as goat, buffalo, sheep, horse, camel, Zebu, Yak, mare and reindeer are critical daily food sources of protein, phosphate and calcium. Furthermore, because of hypoallergenic properties of certain species milk including goats, mare and camel are increasingly recommended as substitutes in diets for those who suffer from cow milk allergies. This book: Discusses key aspects of non-bovine milk production, including raw milk production in various regions worldwide Describes the compositional, nutritional, therapeutic, physio-chemical, and microbiological characteristics of all non-bovine milks Addresses processing technologies as well as various approaches to the distribution and consumption of manufactured milk products Expounds characteristics of non-bovine species milks relative to those of human milk, including nutritional, allergenic, immunological, health and cultural factors. Features six new chapters, including one focusing on the use of non-bovine species milk components in the manufacture of infant formula products Thoroughly updated and revised to reflect the many advances that have occurred in the dairy industry since the publication of the acclaimed first edition, Handbook of Milk of Non-Bovine Mammals, 2nd Edition is an essential reference for dairy scientists, nutritionists, food chemists, animal scientists, allergy specialists, health professionals, and allied professionals.
